RE: Docket No 2020-229-E

I was recently notified of Dominion Energy South Carolina, Incorporated's Establishment of a Solar Choice Metering Tariff. I am opposed to any tariff on solar panels which private citizens have purchased and installed to not only lower their personal energy costs, but also provide a source of "green energy." By lowering our carbon footprint, we are benefiting the world. We are also benefiting energy companies by reducing the need to grow their capacity.

As a retired owner of 30 recently installed solar panels, I am shielding my family from the increasing cost of electricity which Dominion Energy has been imposing on their customers. Should I produce more energy than used in each month, I receive no benefit for adding energy back to "the grid." The addition of any tariff would be another means of allowing "Big Business" to hurt the people of this state

Please disallow any tariff on "green energy" solutions

Respectfully,

Robert E. (Joey) Barnes
